INDEX TO VOLUME XV.

A.

Acetylene generator, *Rands*, 178.
Air, heat of vaporization of, *Shearer*, 188.
Allen, F., Persistence of vision in color-blind subjects, 193.
Test of the liquid air plant at Cornell University, 181.
Alternating current phasemeter, Rayleigh's, *Johonnott*, 276.
Alternating current model, *White*, 316.
Ambler, W., Test of the liquid air plant at Cornell University, 181.
Ames, J. S., *Harper's Scientific Memoirs*, 192.
Astigmatism and distortion, lecture room demonstrations of, *Franklin*, 119.

B.

Barnes, H. T., On the specific heat of supercooled water, 65.
Barnes, J., Light scattered and transmitted by fine particles, 368.
Barnett, S. J., On the Cavendish experiment and the law of inverse squares in electrostatics, 175.
The generalization of Gauss's Theorem, 172.
Bevier, L., Jr., The vowel I^E (as in pit), 44.
The vowel I (as in pique), 271.
Bismuth, magnetostriction in, *Wills*, 1.
Book Reviews:
Geometrical optics, *Herman*, 383.
Harper's scientific memoirs, *Ames*, 192.
Primary Batteries, *Cooper*, 319.
Principles of inorganic chemistry, *Ostwald*, 255.
Science of mechanics, *Mach*, 192.
Studies and difficulties of mathematics, *De Morgan*, 192.
Vector analysis, *Wilson*, 127.
Burgess, G. K., Alfred Cornu, 239.

C.

Capillary waves, viscosity of liquids determined by measurement of, *Watson*, 20.
Carbon, electrical discharges from hot, *Child*, 345.
Carbon resistances, *Longden*, 355.
Carhart, H. S., Cooper's *Primary Batteries*, 319.
Cavendish experiment and law of inverse squares in electrostatics, *Barnett*, 175.
Cell for measuring the electrical resistance of liquids, *Dinwiddie*, 237.
Child, C. D., Electrical discharge from hot carbon, 345.
Color-blind subjects, persistence of vision in, *Allen*, 193.
Coker, E. G., on the effect of low temperature on the recovery of overstrained iron and steel, 107.
Cooke, H. L., On the specific heat of supercooled water, 65.
Cooper, W. R., *Primary Batteries*, 319.
Cornu, Alfred, *Burgess*, 239.
Crystallization from a current-bearing electrolyte, *Heyl*, 335.

D.

Days, W. S., An experiment relating to the application of Lagrange's equations of motion to electric currents, 154.
De Morgan, *Study and Difficulties of Mathematics*, 192.
Density and coefficient of cubical expansion of ice, *Vincent*, 129.
Dichromatism, prisms and plates for showing, *Wood*, 121.
Dinwiddie, W. W., A cell for measuring the electrical resistance of liquids, 237.

Distortion and astigmatism, lecture room demonstrations of, *Franklin*, 119.
Drew, E. R., Interference in thin films, 226.

E.

Earhart, R. F., Sparking distances between plates for small distances, 163.
Electrical convection, magnetic effect of, *Pender*, 291.
Electrolytic rectifier, theory of, *Guth*, 327.
Electrolyte, crystallization from a current-bearing, *Heyl*, 335.
Electrostatics, law of inverse squares in and Cavendish experiment, *Barnett*, 175.

F.

Films, thin, interference in, *Drew*, 226.
Flames, luminous, temperature and spectral energy of, *Stewart*, 306.
Fourier's series, application of to harmonic analysis, *Prentiss*, 257.
Franklin, W. S., Lecture demonstrations of astigmatism and of distortion, 119.
Frequencies of a horizontally suspended coiled spring, *Rogers*, 374.

G.

Gauss's Theorem, generalization of, *Barnett*, 172.
Guthe, K. E., On the theory of the electrolytic rectifier, 327.

H.

Hall, E. E., The penetration of totally reflected light into the rarer medium, 73.
Harmonic analysis, practical application of, *Prentiss*, 257.
Hathaway, A. S., Wilson's *Vector Analysis*, 127.
Heat of vaporization of air, *Shearer*, 188.
Herman, R. A., *Geometrical Optics*, 383.
Heyl, P R., Crystallization from a current-bearing electrolyte, 335.

I.

Ice, density and coefficient of cubical expansion of, *Vincent*, 129.
Induction coil, contributions to the study of, *Ives*, 7.
Induction, magnetic, and attractive force, *Poucher*, 233.
Interference fringes, a spectroscopic application of Talbot's, *Tsuruta*, 380.
Interference in thin films, *Drew*, 226.
Invisibility of transparent objects, *Wood*, 123.
Iron and steel, effect of low temperature on the recovery of overstrained, *Coker*, 107.
Ives, J. E., Contributions to the study of the induction coil, II., 7.

J.

Johonnott, E. S., Rayleigh's alternating current phasemeter, 276.

K.

Knipp, C. T., A method for maintaining intermediate temperatures, 125.

L.

Lagrange's equations of motion to electric currents, experiment relating to the application of, *Day*, 154.
Light totally reflected, penetration of, into the rarer medium, *Hall*, 73.
Light scattered and transmitted by fine particles, *Barnes*, 368.
Liquid air plant at Cornell University, test of, *Allen and Ambler*, 181.
Lomb, H. C., Herman's *Geometrical Optics*, 383.
Longden, A. C., Carbon resistances, 355.
Low temperature research, reference to papers on, *Shearer*, 343.

M.

Macfarlane, A., Peter Guthrie Tait, 51.
Mach, E., *Science of Mechanics*, 192.
Mackenzie, A. S., An instrument for drawing a sine curve, 366.
Magnetic effect of electrical convection, *Pender*, 291.

Magnetization, relation between the changes of length and the changes in thermoelectric power, caused by, *Rhoads*, 321.
Magnetostriction in bismuth, *Wills*, 1.

N.

Nichols, E. L., Mach's *Science of Mechanics*, 192.
Ames' *Harper's Scientific Memoirs*, 192.
Ostwald's *Principles of Inorganic Chemistry*, 255.
De Morgan's *Study and Difficulties of Mathematics*, 192.

O.

Ostwald, W., *Principles of Inorganic Chemistry*, 255.

P.

Particles, fine, light scattered and transmitted by, *Barnes*, 368.
Pender, H., On the magnetic effect of electrical convection, 291.
Phasemeter, Rayleigh's alternating current, *Johonnott*, 276.
Poucher, G. E., Attractive force and magnetic induction, 233.
Prentiss, R. W., Practical application of Fourier's series to harmonic analysis, 257.
Prisms and plates for showing dichromatism, *Wood*, 121.

R.

Rands, H. A., An acetylene generator, 178.
Resistances, carbon, *Longden*, 355.
electrical, cell for measuring, *Dinwiddie*, 237.
Rhoads, E., A relation between the changes of length and the changes in thermoelectric power caused by magnetization, 321.
Rogers, F. J., Frequency of a horizontally suspended coiled spring, 374.

S.

Shearer, J. S., The heat of vaporization of air, 188.
References to papers on low temperature research, 243.
Sine curve, An instrument for drawing, *Mackenzie*, 366.
Sparking distances between plates for small distances, *Earhart*, 163.
Specific heat of supercooled water, *Barnes and Cooke*, 65.
Spectral energy curves of luminous flames, *Stewart*, 306.
Spring, coiled, horizontally suspended, frequencies of, *Rogers*, 374.
Stewart, G. W., The temperature and spectral energy curves of luminous flames, 306.

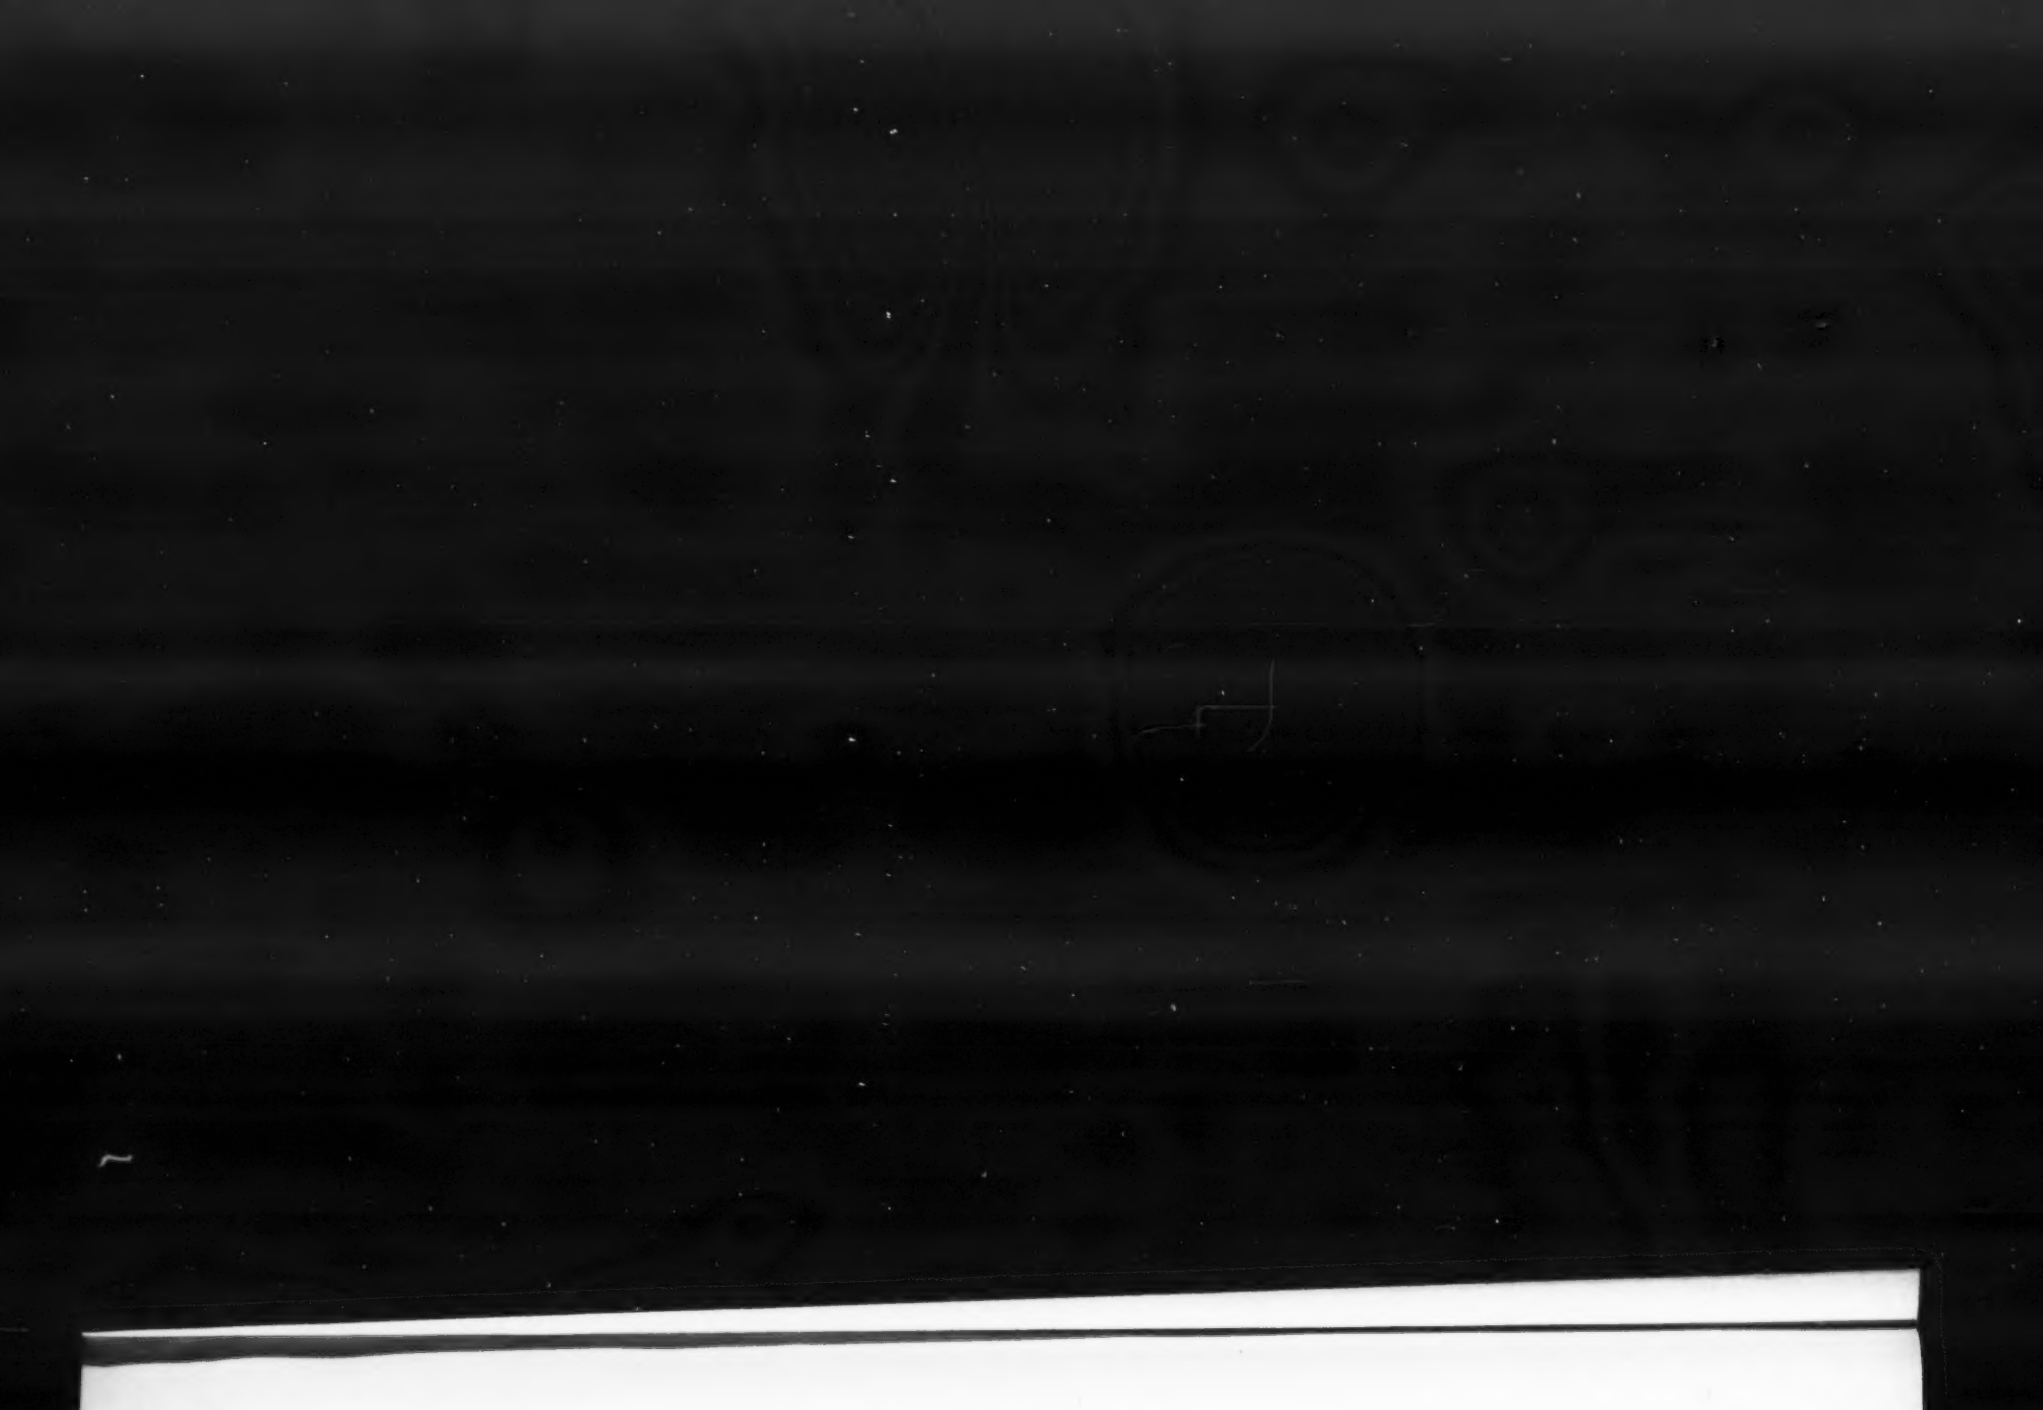
T.

Tait, Peter Guthrie, *Macfarlane*, 51.
Taylor, A. H., Wireless telegraphy with a relay-telephone receiver, 39.
Temperature of luminous flames, *Stewart*, 306.
Method for maintaining intermediate, *Knipp*, 125.
Thermoelectric power and length, changes in caused by magnetization, *Rhoads*, 321.
Totally reflected light, penetration of, into the rarer medium, *Hall*, 73.
Tsuruta, K., Optical notes (1): On a spectroscopic application of Talbot's interference fringes, 380.

V.

Vincent, J. H. The density of coefficient of cubical expansion of ice, 129.
Viscosity of liquids determined by measurement of capillary waves, *Watson*, 20.
Vision, persistence of, in color-blind subjects, *Allen*, 193.
Vowel I^E (as in pit), *Bevier, Jr.*, 44.
Vowel I (as in pique), *Bevier, Jr.*, 271.

W.

Water, specific heat of supercooled, *Barnes and Cooke*, 65.


Watson, F. R., Viscosity of liquids, determined by measurement of capillary waves, 20.
White, W. P., An alternating current model, 316.
Wills, A. P., On magnetostriction in bismuth, 1.
Wilson, E. B., *Vector Analysis*, 127.
Wireless telegraphy with a relay-telephone receiver, *Taylor*, 39.
Wood, R. W., The invisibility of transparent objects, 123.
Wood, R. W., Prisms and plates for showing dichromatism, 121.
